8th Annual Medical Imaging Informatics & Teleradiology Conference

TARGET AUDIENCE:

This conference is intended for an audience of Healthcare Professionals: Radiologists, Physicians, Technologists, PACS Managers, DI Managers, IT Professionals, CIO/CTO's, Industry Representatives.

OBJECTIVES:

The Medical Imaging Informatics and Teleradiology course addresses issues arising from the growing penetration of computers in medicine and the need to understand the new technologies necessary to acquire, process, store, and exchange medical images. This annual conference brings together experienced speakers to cover challenging topics in the field of medical imaging informatics and provides a unique opportunity to approach the experts and find answers to questions and issues.

This year's conference will cover topics of interest involving the use of computers in medical imaging applications, and how computing can help improve our performances:

- Regional networks and image collaboration: the Chinese experience; comparison with the Canadian experience.
- Update on standards and how they address new constraints in image and critical information delivery in radiology.
- Ontology and terminology, how can we improve reliability of our reports through structured reporting and data mining.
- How do we create better Radiologists through technology and education, and the role for evidence-based methodology in radiology.
