or email: pbsg.edn@gmail.com
Teaching students in a clinical setting can be a challenging but very rewarding experience! Unfortunately, most clinicians have never received any formal training on how to teach effectively. Opportunities for faculty development may not be available or inconvenient to attend. A Practice-Based Small Group (PBSG-ED) format may be an option for you and your colleagues.

Flexible to organize

These educational “case based” sessions can be used anytime and anywhere. Each session is designed to run for 90 to 120 minutes, for a group of 5-12 participants.

Target audiences include:
• clinical teachers from various health care professions.
• new faculty members.
• interprofessional groups of educators.

Everything you need provided

Participants are provided with a printed module containing real life teacher-learner cases, stimulus questions, evidence-based information points keyed to case commentary, teaching tools, resources, and references.

The group facilitator is provided with a two page guide in the module package. The facilitator can also be a co-learner, expertise in the topic is not required.

High quality material

The modules are developed in collaboration with a professional researcher, writer, clinician authors, round-table of teachers, and reviewed by experts.
