Short term neonatal outcomes in pregnancy induced hypertension

Presented by Dr. Abdul Razak, Clinical Fellow, Division of Neonatology. Supervisor: Dr. Amit Mukerji

Goals/Objectives: Discuss the study results and seek input.

Summary: In this matched cohort study, we evaluated the impact of PIH on short-term neonatal outcomes, with a special focus on short-term respiratory morbidity by utilizing a novel parameter (“Respiratory Index”) as a surrogate measure to understand the true impact of PIH on respiratory morbidity in early neonatal period. This index incorporates area under the curve (AUC) for oxygen and mean airway pressure on invasive ventilation to reflect infant’s ventilatory needs in the early postnatal period.

All faculty, research staff, allied health staff, and trainees are welcome to attend.

*These are interactive sessions - we want to hear your feedback, questions and great ideas!*
