

Interdisciplinary GRAND ROUNDS

THE PROGRAMME
FOR FACULTY
DEVELOPMENT
IS PLEASED TO ANNOUNCE:

WOMEN'S HEALTH OFFICE
MAY COHEN LECTURE IN WOMEN'S HEALTH

Theme

What Makes Women Sick?

Does Biomedicine Have all the Answers?

The average life expectancy of women is greater than men in most, but not all countries. The traditional biomedical approach of trying to explain disease patterns by biological factors is limited, as it ignores the powerful effect that social and economic factors have on health.

The influence of these factors on the health of women in Canada, and around the world will be presented, and the major public health strategies that can improve the health of women will be highlighted.

Date & Time

THURSDAY
june 13th 2002
4:30 - 6:00 p.m.

Location

Room 4E20, Health Sciences Centre,
McMaster University, 1200 Main St. West
